Electrification for renters

Talk to your building owner

Although not a route everyone may feel comfortable or be able to take, consider asking your landlord or property manager to electrify. If your gas stove is old and in need of replacement soon, this may be easier to do. Consider telling the story of why electrifying kitchens is important including:

- [Indoor air quality & health benefits](#)
- [Benefits to the climate](#)
- [Rebates available to help cover electrification costs](#)

Countertop induction 101

Induction hobs can be placed on top of your existing gas stove to clear your countertops. To make cleanup easier, you can place something non-flammable and flat under the cooktop like a large baking tray or silicon mat to make the cooktop more stable and avoid dirtying difficult-to-clean metal grates. For added safety, some may choose to unplug the gas stove, switch off the gas line to the stove, or remove the knobs to avoid accidentally turning it on while cooking.

Induction hobs live comfortably on kitchen counters among the full suite of modern electric appliances like water kettles, microwaves, and more.
